DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121.
 - I. Claims 1-8, drawn to a semiconductor device, classified in class 257, subclass 692.
 - II. Claims 9-11, drawn to a method of manufacturing a semiconductor device, classified in class 438, subclass 117.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP 806.05(f)). In the instant case, unpatentability of the Group I invention would not necessarily imply unpatentability of the Group II invention, because the device of Group I invention could be made by a process materially different from that of the Group II invention. For example, the process of claim 9 can be materially altered by mounting a semiconductor chip having electrodes on the semiconductor chip, via an anisotropic conductive layer, on the surface of substrate, then forming built-up layers on the other surface of core substrate opposite to the one surface of substrate which the semiconductor chip is mounted, then electrically connecting the electrodes on the semiconductor chip and those on the surface of the core substrate via the anisotropic conductive layer.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, the fields of search are not co-

extensive and separate examination would be required. restriction for examination purposes as indicated is proper.

4. Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 FR 1.143).
